## Allergens in Fluon<sup>®</sup> grades

This is to confirm that none of the following are used in the manufacture of Fluon<sup>®</sup> PTFE G, CD and FL grades, ETFE grades, PFA grades or Aflas<sup>®</sup> fluoroelastomer grades as supplied by AGC Chemicals Europe, Ltd.

milk/milk products	eggs	fish
crustacean shellfish	tree nuts	peanuts,
wheat	soybeans	

Yours sincerely,

G P Andrews  
Product Steward  
AGC Chemicals Europe, Ltd.

Information contained in this publication (and otherwise supplied to users) is based on our general experience and is given in good faith, but we are unable to accept responsibility in respect of factors that are outside our knowledge or control. All conditions, warranties and liabilities of any kind relating to such information, expressed or implied, whether arising under statute, tort or otherwise are excluded to the fullest extent permissible in law. The user is reminded that his legal responsibility may extend beyond compliance with the information provided. Freedom under patents, copyright and registered designs cannot be assumed.

Fluon<sup>®</sup> and Aflas<sup>®</sup> grades are general industrial grades. It is the responsibility of the purchaser to check that the specification is appropriate for any individual application. Particular care is required for special applications such as pharmaceutical, medical devices or food. Not all grades are suitable for making finished materials and articles for use in contact with foodstuffs. It is advisable to contact the AGC Chemicals Europe, Ltd. sales office for the latest position. Users of Fluon<sup>®</sup> and Aflas<sup>®</sup> are advised to consult the relevant Health and Safety literature which is available from the AGC Chemicals Europe, Ltd. sales office.
