

Silica Packaging Material for Size Exclusion Chromatography (SEC)

Size Exclusion Chromatography (SEC) is a chromatographic process that separates larger molecules such as polymers, biopolymers, polysaccharides, and proteins by size and in some cases, molecular weight. M.S.GEL silica provides a wide range of particle sizes (1.6µm – 5µm) with pore size ranges from 250-500Å. M.S.GEL spherical particles with a narrow particle size distribution minimize back pressure and is the best choice for Size Exclusion Chromatography.

Characteristics

- Available in a wide variety of particle sizes - 1.6µm, 3µm, 5µm
- Pore size distribution is strictly controlled - 25nm, 45nm
- High mechanical strength

Physical Properties

Grade	Particle Size Distribution D50	Pore Diameter	Pore Volume
EP-DM-1.6-250A	1.6µm	25nm	1.5 ml/g
EP-DM-3-250A	2.7µm	25nm	1.5 ml/g
DP-DF-5-250A	4.0µm	25nm	1.5 ml/g
EP-DM-1.6-420A	1.6µm	45nm	1.5 ml/g
EP-DM-3-420A	2.7µm	45nm	1.5 ml/g
EP-DF-5-500A	4.0µm	45nm	1.5 ml/g

Particle Size Distribution

Packaging

M.S.GEL™ products are packaged in a plastic bottle or carton, double-lined with a polyethylene bag.

Storage and Shelf Life

M.S.GEL™ silica have a shelf life of >2 years from the date of manufacture when stored in the original, unopened package between 10 and 40 °C.

Safety and Handling

A Safety Data Sheet for this product can be obtained from your local AGC representative. Before handling, it is recommended to review the Safety Data Sheet for handling, safety and health information.

Product Specifications

Additional product specifications and information can be obtained by request.
