Fluon+™ EM-20010 Product Information

Description

Fluon+™ EM-20010 (464015014) is a "ready-to-use" antimicrobial fluoropolymer compound of specialty additive-filled ETFE (ethylene-co-tetrafluoroethylene). This compound improves upon the inherent cleanability and anti-fungal properties of ETFE by adding the proprietary filler. As a result, this ETFE-based material protects components against degradation by microorganisms. This product is supplied in cylindrical pellet form, approximately 0.125” long by 0.080” diameter.

*This product does not protect users or others against food-borne (or disease-causing) microorganisms. Always clean thoroughly after use.

Features

- Reduces the growth of microbes that may degrade components
- Abrasion resistant and scrubbable
- Resistant to harsh chemicals
- Excellent transparency, will not yellow over time
- Base resin is FDA compliant for food contact applications (FCN 1914)
- Non-flammable

End Uses

Critical applications where the thermal and chemical resistance and cleanability of ETFE are required along with antimicrobial properties provided by the proprietary additive.

- Wall coverings
- Protective coverings for medical and dental equipment
- Food and beverage tubing and hose
- Desk, countertop and table coverings
- Skins and linings for cleanroom equipment and touchscreens
Fluon+™ EM-20010 Product Information

Processing
This product can be processed using conventional thermoplastic techniques such as film or tube extrusion or injection molding under standard ETFE operating conditions. It is strongly recommended that process equipment exposed to molten resin be made of corrosion-resistant metals such as Monel, Inconel, or Hastelloy.

Packaging
Fluon+ EM-20010 is packaged in a lined plastic keg containing 55 pounds or 25 kilograms and is also packaged in a lined fiber drum containing 225 lbs.

Hazardous Substances
This product does not contain lead, hexavalent chromium, or cadmium, and are used in applications where RoHS (Restrictions on the use of Certain Hazardous Substances) compliance is required.

Handling Precautions
Heating Fluon® and Fluon+™ products in excess of 750°F (399°C) can produce toxic fumes. It is, therefore, necessary to provide local exhaust ventilation in areas where Fluon® products are exposed to high temperatures. Avoid breathing fumes or contaminating smoking tobacco with fumes, powder, or dust.

Thermal decomposition of this product will generate hydrogen fluoride, which is corrosive. Corrosion resistance materials are required for prolonged contact with molten resin.

Safe Handling Information
A summary of the hazards, as defined by OSHA Hazard Communication Standard, 29 CFR 1910.1200 for this product are:

Physical hazards: None
Health hazards: None
