Notice of Fluon Filled PTFE Compound Price Increase

Dear Valued Customer,

We wanted to notify you that AGCCA will be increasing its prices on all grades of Fluon® filled PTFE compounds as a result of recent global developments. We will determine the specific price increase following the U.S. government's April 30th ruling on Chemours' antidumping petition on PTFE resins from China and India.

Import duties on PTFE resins and other rising raw material costs greatly impact our production costs, and global demand for quality fluoropolymer products continues to increase.

This price increase is necessary for AGC to ensure a continuous supply of the quality raw materials required to produce innovative products. As a leading manufacturer of fluoropolymer compounds, we must also continue investing in manufacturing technology, personnel and services to support product advancements.

We appreciate your business and hope to remain your trusted long-term supplier. Please contact your account representative with any questions or concerns.

Best regards,

Gary Eckrote
Business Director
AGC FluoroCompounds Group
