Dear Valued Customer,

In the manufacturing process of all grades and types of Fluon® ETFE and PFA, AGC does not intentionally use perfluorooctanoic acid (PFOA) (and basically never has). This is because the suspension polymerization used does not require the use of a fluorosurfactant (as compared to dispersion polymerization).

The Chemicals Company of AGC has defined its mission as “**Chemistry for a Blue Planet**”, and these products are in furtherance of this mission.

If you have any questions or need additional information, please contact me at (610) 423-8112. Thank you for your business, and we look forward to continue working with you as one of our important customers.

Sincerely,

A handwritten signature in black ink, appearing to read "Jonathan C. Clapp".

Jonathan C. Clapp
Senior Manager – Supply Chain
